24. Program Frameworks¶

The modules described in this chapter are frameworks that will largely dictate the structure of your program. Currently the modules described here are all oriented toward writing command-line interfaces.

The full list of modules described in this chapter is:

[24.1. cmd — Support for line-oriented command interpreters](#)

- [24.1.1. Cmd Objects](#)

[24.2. shlex — Simple lexical analysis](#)

- [24.2.1. shlex Objects](#)
- [24.2.2. Parsing Rules](#)

Previous topic

[23.2. locale — Internationalization services](#)

Next topic

[24.1. cmd — Support for line-oriented command interpreters](#)
